## Reasons For Allowance

The following is an examiner's statement of reasons for allowance:

• The primary reasons for allowance for claims 1-26 are the inclusion of the limitations of a method for adjusting dot-gain for a halftone binary bitmap file comprising the steps of filtering binary pixels with a digital filter and generating a weighted sum of pixels, producing a multilevel pixel from the weighted sum, comparing the multilevel pixel to a preset level and generating a binary pixel output, and collecting the binary pixel output and forming an adjusted halftone binary bitmap file. It is these limitations, alone or combined as claimed, that have not been taught, found, or suggested by prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Schweid et al (5,835,630) teach a filter that includes a plurality of onedimensional first dimension filters operating in a first dimension, each of the filters operating on the digital image data in accordance with predetermined filter coefficients to produce a one-dimensional output signal.
- Sullivan (5,051,844) teaches a halftoning method for creating a binary image from a continuous-tone image is improved by including human visual blur function in a recursive error propagation algorithm so that perceived error rather than binary error is propagated.
